

Wheat

Variety fact sheet – Northern NSW & Queensland

AGT- Kudos[®]

- Excellent alternative to LRPB Lancer[Ⓛ]
- Significant increase in profitability relative to LRPB Lancer[Ⓛ]
- Very high yield, particularly in early sown trials
- Very good yield performance in the presence of crown rot
- Moderately short plant type, with very good lodging tolerance
- APH quality classification with high test weights and low screenings

Breeder's comments

Northern growers looking to increase profitability should look no further than new variety AGT-Kudos[®].

AGT-Kudos[®] is regarded as an excellent replacement for widely grown variety LRPB Lancer[®], offering vast improvements in yield and profitability, but with similar maturity, plant type and physical grain quality characteristics.

AGT-Kudos[®] will also be compared to newly released Sundancer[®]. NVT data suggests that AGT-Kudos[®] holds a yield advantage over Sundancer[®] when sown in early trials, while Sundancer[®] has a slight advantage when sown in the main season planting window. Agronomically, AGT-Kudos[®] has better test weight, sprouting tolerance and lodging tolerance than Sundancer[®].

Importantly for northern growers, AGT-Kudos[®] has been shown to perform in the presence of crown rot, maintaining its yield advantage over LRPB Lancer[®] when crown rot is present, and increasing its advantage over Sundancer[®].

A well-rounded variety for late April/early May plantings in the north, AGT-Kudos[®] is set to attract a large following with growers who are looking for the next step in profitability.

Table 1. Specifications

Background

Tested as	SUN1232H
Released	2025
EPR rate	\$4.10/tonne + GST

Disease

Stem Rust resistance*	RMR
Stripe Rust resistance*	MRMS
Leaf Rust resistance*	MRMS
Yellow Leaf Spot resistance*	MS
Septoria Tritici Blotch resistance*	S
Pratylenchus Thornei resistance*	MR (P)
Pratylenchus Thornei tolerance*	T (P)
Crown Rot resistance*	MSS (P)

Plant Characteristics

Maturity speed [^]	Slow
Maturity habit [^]	Spring
Sowing window [^]	Early
Novel herbicide tolerance [^]	None (conventional tolerance)
Head type [^]	Awne
Plant height [^]	Moderately short
Coleoptile length [^]	Short
Lodging tolerance [^]	MT

Abiotic Stress

Boron tolerance [^]	Does not carry tolerance gene
Acid/aluminium tolerance [^]	Does not carry tolerance gene

Grain Quality

Quality classification	APH
Grain colour	White
Screenings level [^]	Low
Test weight [^]	Moderate
Sprouting tolerance [^] ^o	MII
Black Point resistance*	NA

Legend

R	Resistant	VI	Very Intolerant	o	Rating based on Germination Index Values
MR	Moderately Resistant	(P)	Provisional rating	^	AGT ratings/data interpretation. Comprehensive AGT agronomic trait ratings and data can be found at: https://bit.ly/Traits_2026
MS	Moderately Susceptible	NA	Not Available		
S	Susceptible	/	Pathotype differences		
VS	Very Susceptible	-	Range		
T	Tolerant	,	Mixed phenotype		
MT	Moderately Tolerant	#	May be more susceptible to alternate pathotypes		
MI	Moderately Intolerant	*	NVT consensus ratings 2026		
I	Intolerant				

Gross Income

A financial analysis of the performance of AGT-Kudos[®] in early sown NVT trials in the northern region shows that farmers can produce much higher returns when choosing to grow AGT-Kudos[®] instead of LRPB Lancer[®]. Over-all, in this dataset AGT-Kudos[®] returned an extra \$168 per hectare than LRPB Lancer[®].

When multiplied out to paddock scale, a significant increase in over-all business profit may be achieved by simply switching varieties to AGT-Kudos[®] (Figure 1).

Figure 1. Profitability improvement of AGT-Kudos[®] over LRPB Lancer[®]

Source: 2024 & 2025 NVT early season trial data from the northern region. Includes single site data for grain yield, protein content, screenings level and test weight. Grain pricing data was sourced from Profarmer for delivery to the Brisbane & Newcastle Ports (closest port to each trial).

[] Number of sites where all varieties were present in the dataset

How was this analysis done?

Single site NVT data for protein content, screenings and test weight were used to determine the grade that the grain from a variety at that site would have been received into, taking into account the variety's classification in that region. Sites where all varieties were present were included in the dataset.

Grain prices for each grade were obtained from Profarmer for the period 2024-2025 in the relevant port zone and the average grade price was used to calculate value of the grain. This grain value was multiplied by the NVT yield performance at that site (single site yield data was also used) to determine the gross value of each variety at each site.

The average value of the variety across each of the sites within a region was calculated to for the 'average variety value' for a region.

Grain yield

NVT long term yield predictions show that AGT-Kudos[®] is particularly well suited to early planting opportunities, slightly out-yielding Leverage[®], and eclipsing Sundancer[®] by 4% over-all (Figure 2).

However, when planted in the main season sowing window, Leverage[®] and Sundancer[®] have had a small advantage over AGT-Kudos[®] (Figure 3).

In both instances though, AGT-Kudos[®] has delivered far superior yields than widely grown variety LRPB Lancer[®], offering around 14% higher yields when sown early, and 8% higher yields when planted in the main sowing window.

Grain yield in the presence of crown rot

Long term crown rot trials show that AGT-Kudos[®] has demonstrated an ability to maintain yield in the presence of crown rot, offering higher yields than both Sundancer[®] and LRPB Lancer[®] (Figure 4).

Figure 4. Grain yield of AGT-Kudos[®] versus comparators under crown rot pressure - AGT trials

{ }: Trial mean

Note: Average PreDicta B[®] level recorded at trial locations across years = 4.6 (log Fusarium DNA/g soil). A level above 2.0 is considered high.

Variety comparisons

AGT-Kudos[®] has an APH quality classification in northern NSW/QLD and produces large grain, similar to LRPB Lancer[®] with better sprouting tolerance than Sundancer[®] and LRPB Raider[®].

AGT-Kudos[®] has a moderately short plant type with good lodging tolerance, and matures at a similar time to LRPB Lancer[®].

Seed Availability

Please contact an AGT Affiliate or your local retailer for seed. Consult the AGT website for AGT Affiliate contact details (www.agtbreeding.com.au/affiliates). AGT varieties can be traded between growers upon the completion of a License Agreement as part of AGT's Seed Sharing™ initiative (www.agtbreeding.com.au/seedsharing)

PBR and EPR

Varieties denoted by the ® symbol are protected by Plant Breeders Rights (PBR) and all production (except seed saved for planting) is liable to an End Point Royalty (EPR), which funds future plant breeding. Growers of PBR protected varieties will be subject to a Grower License Agreement that acknowledges that an EPR must be paid on all production other than seed saved for planting.
