

Bigfoot CL[®]

- A higher yielding alternative to Maximus[Ⓢ] CL and Commodus[Ⓢ] CL, with better standability than Commodus[Ⓢ] CL
- Best suited to low-medium rainfall environments
- Tolerant to Clearfield[®] Intervix[®] herbicide
- Good grain size and test weight
- A Compass[Ⓢ] style plant type, but shorter and lower risk of lodging
- FEED quality

Breeder's comments

Barley varieties carrying the Clearfield® tolerance trait have become the most widely grown across SA, Victoria and southern NSW, with the herbicide tolerance trait being of great value to growers in the battle against weeds.

We are proud to release Bigfoot CL^Φ as our first Clearfield® barley variety, in a plant type that will suit a wide range of environments.

Bigfoot CL^Φ is closely related to the taller varieties that offer good early vigour such as Compass^Φ and Commodus^Φ CL (likely to be an important trait in an optimised integrated weed management system), however Bigfoot CL^Φ has reduced height and lower risk of lodging than other Compass^Φ style varieties.

Whilst being a feed quality variety, Bigfoot CL^Φ offers very high yields, particularly in low to medium rainfall environments.

Like other varieties in its family, Bigfoot CL^Φ offers a very good physical grain quality package, producing low levels of screenings, high retentions, and moderately high test weights.

Clearfield® Barley Production System

Bigfoot CL^Φ has been specifically developed to carry tolerance to Clearfield® Intervix® herbicide. Intervix® is a member of the imidazolinone chemical family with Group 2 (formerly Group B) mode of action, offering one-pass post-emergent knockdown and residual control of many major grass and broadleaf weeds. Intervix® herbicide is available via the Clearfield® Agricentre Agency system, administered by BASF. For more information visit crop-solutions.basf.com.au/products/intervix or Toll Free 1800 558 399.

MR	Moderately Resistant	(P)	Provisional rating	^	AGT ratings/data interpretation. Comprehensive AGT agronomic trait ratings and data can be found at: https://bit.ly/Traits_2026
MS	Moderately Susceptible	NA	Not Available		
S	Susceptible	/	Pathotype differences		
VS	Very Susceptible	-	Range		
T	Tolerant	,	Mixed phenotype		
MT	Moderately Tolerant	#	May be more susceptible to alternate pathotypes		
MI	Moderately Intolerant	*	NVT consensus ratings 2026		
I	Intolerant				

Grain yield

Relative to other Clearfield® barley varieties suited to low-medium rainfall environments, Bigfoot CL[®] is highly competitive, offering a 3% yield advantage over widely-grown Maximus[®] CL, and 6% yield above Commodus[®] CL over-all across SA/Vic/southern NSW (Figure 1).

Variety comparisons

Bigfoot CL[®] shares a similar plant type to the Compass[®] family of varieties (which includes Commodus[®] CL), generally offering more early vigour than the Hindmarsh[®] family of varieties (including Maximus[®] CL). However, Bigfoot CL[®] is shorter, and therefore offers less risk of lodging than Commodus[®] CL (and others closely related to Compass[®]).

Bigfoot CL[®] has produced grain with low screenings levels, high retentions and moderately high test weight.

Seed Availability

Please contact an AGT Affiliate or your local retailer for seed. Consult the AGT website for AGT Affiliate contact details (www.agtbreeding.com.au/affiliates). AGT varieties can be traded between growers upon the completion of a License Agreement as part of AGT's Seed Sharing™ initiative (www.agtbreeding.com.au/seedsharing)

PBR and EPR

Varieties denoted by the ® symbol are protected by Plant Breeders Rights (PBR) and all production (except seed saved for planting) is liable to an End Point Royalty (EPR), which funds future plant breeding. Growers of PBR protected varieties will be subject to a Grower License Agreement that acknowledges that an EPR must be paid on all production other than seed saved for planting.
